## PROFESSIONAL SUMMARY

To build a strong foundation in software development by applying my programming knowledge and problem-solving skills to real-world applications. Eager to learn, collaborate and grow in a professional environment. Driven to apply my technical knowledge and creativity to build efficient and user-focused solutions while growing as a skilled professional in the IT industry.

## EDUCATION

|                                                                                            |                                |
|--------------------------------------------------------------------------------------------|--------------------------------|
| <b>Bachelor of Engineering (CSE)</b><br>GOVT. Engineering College, Mosalehosahalli, Hassan | <b>2022–2026</b><br>CGPA: 8.88 |
| <b>Higher Secondary Education (PCMB)</b><br>Brigade PU College, Hassan                     | <b>2020–2022</b><br>93%        |

## TECHNICAL SKILLS

- **Programming Languages:** C, Python, Java
- **Web & Database Technologies:** HTML, CSS, JavaScript, MySQL, MongoDB, React
- **Tools & Platforms:** VS Code, PyCharm, Jupyter Notebook, Apache, GitHub, JFLAP, LaTeX

## EXPERIENCE

- Completed 3-month internship in Machine Learning and Generative AI at Contriver.
- Attended technical webinars on Artificial Intelligence, Cloud Computing, and Web Development to gain industry knowledge and practical insights.

## PROJECTS

- **Smart Identification and Edibility Detection System**  
Developed a machine learning-based system to identify fruits and vegetables, detect ripeness, and provide nutritional guidance and warning alerts. Implemented analytics and customized results to improve user experience.
- **Care Cloud – Website on donation**  
Developed a donation management web application that allows individuals, organizations and institutions to donate and track donations. The platform supports donations such as study materials, money, clothes, books etc for students and other receivers.
- **Shortcut Key Saver**  
Built a full-stack CRUD application to manage and display keyboard shortcuts with descriptions.
- **Project Topic Recommendation System**  
Developed a web application that recommend suitable project topics with interactive and user-friendly features.
- **Train Delay Propagation model**  
Developed a machine learning-based system to predict train delays using historical train data and provide delay reasons, train tracking, and notifications through the application and email. Also suggested alternative transportation with estimated distance and cost during major delays.
- **Product Description Generator**  
Developed a machine learning based full-stack application that generates product descriptions using TF-IDF and cosine similarity algorithms. The system is designed to support e-commerce applications with efficient content generation.

## CERTIFICATION

- Data Analytics Job Simulation – Deloitte
- AI for Beginners – HP Life
- Introduction to Data Analytics – Simplilearn
- Introduction to Generative AI Studio – Google Cloud & Simplilearn SkillUp
- Python for Beginners – Simplilearn SkillUp
